

Cinema Starline Seating adopts D-BOX motion simulation technology

Longueuil, Québec, February 16, 2006 – Only weeks after announcing the creation of a seating manufacturer certification program for its motion simulation technology, D-BOX Technologies Inc. (TSX-V: DBO.A) announced today a new 'Motion by D-BOX' certified partner, Cinema Starline Seating (www.cinemastarlineseating.com). Cinema Starline is particularly well known as a provider of high-end seating for world-class sites such as the *42nd Street Theater* in New York and *Disneyland* in California.

"We are delighted to count Cinema Starline as one of our certified partners," declared Claude Mc Master, President and Chief Executive Officer of D-BOX Technologies. "We have received numerous requests from potential partners since we created the program in January, because the seating industry recognizes the competitive advantage that D-BOX's technology can bring to their products."

"Cinema Starline is proud to have been chosen as a partner by D-BOX Technologies," stated Charles Beyrodt, President of Cinema Starline Seating. "We were selected primarily due to our high manufacturing standards, which meet the rigorous installation requirements of D-BOX simulation systems."

"In terms of strategy, the 'Motion by D-BOX' certification program is another important step in the implementation of the strategic plan introduced last August, which aims to establish our technology as the new standard in the entertainment industry. Our home theatre penetration strategy targets four markets that we are working simultaneously: movie studios, audio video equipment manufacturers, seating manufacturers and retailers. The 'Motion by D-BOX' certification program will allow us to increase our manufacturing capacity and expand our distribution network. Along with our seating manufacturer initiatives, we are also pursuing discussions with key players in our other target markets," added Mr. Mc Master.

About the 'Motion by D-BOX' certification program

The 'Motion by D-BOX' program offers certified seating manufacturers the required components (vertical actuators, SynDrive modules and 340c controllers) and the technical support needed to integrate them and sell seating to their customers. For 'Motion by D-BOX' program partners, this is a unique opportunity to move into the entertainment industry motion simulation market. Selling this new technology will set them apart from the competition. Names of certified partners will be posted on D-BOX's website, and the 'Motion by D-BOX' logo will be affixed on every seat equipped with D-BOX technology.

About D-BOX

D-BOX Technologies designs and manufactures high-technology motion simulators destined mainly for the entertainment industry. Its unique, patented technology uses motion codes specifically programmed for each film or video game, resulting in motion perfectly synchronized with on-screen action. D-BOX is aiming to become the global standard in the entertainment world. Visit us at www.d-box.com.
